

Download and INSTALL github desktop at desktop.github.com

CLICK SKIP this step

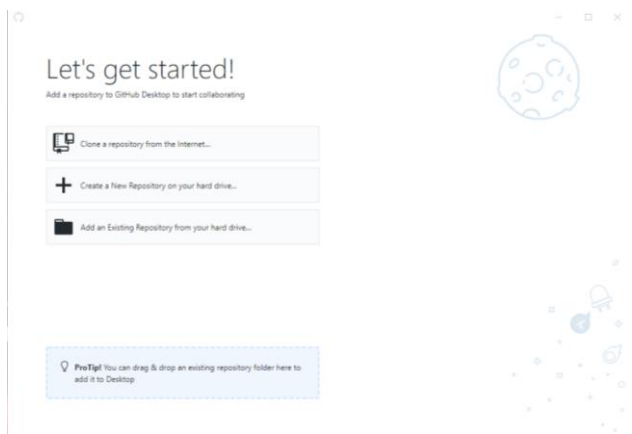

Put your name and email

Click Finish

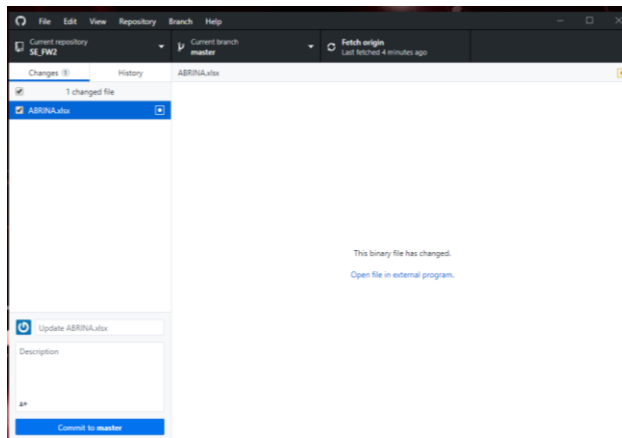

Click Clone from Internet and Sign-in your github account

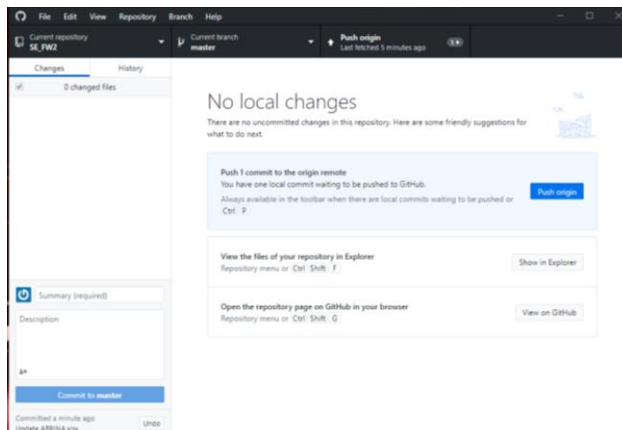

After you Login youll see your repository and click Clone

You will see all your github files from github repository you have at the My Documents of your Computer, Inside the Github Folder

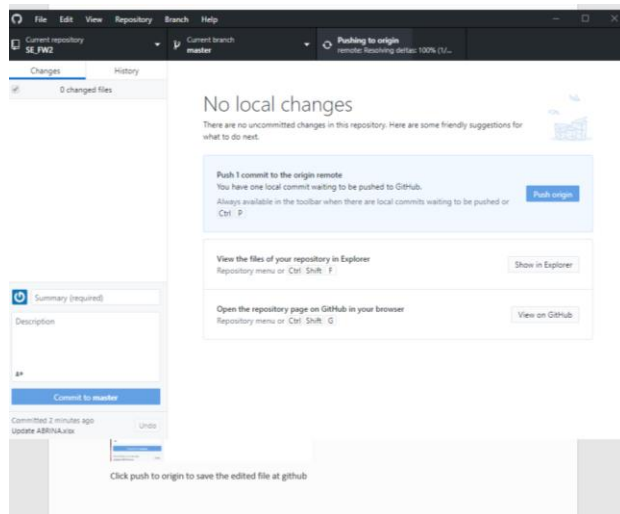

After you save your edited file if you update any document inside github folder, just Ctrl+S for Save and go back to github desktop, and there you'll see the Changes

Click the Commit to master and another prompt will appear

Click push to origin to save the edited file at github

Wait the pushing to origin to get finish

That's all

Btw, you can see all the edited and work files with dates that they edit a file or project at History Tab beside Changes.
